

Munich Airport – 20 years

1992 and 2012: a comparison

The airport started 2012 with yet another record for passenger traffic: In the first four months of the year, 11.6 million passengers used Munich Airport. This was more than the airport ever handled in an entire year at the old Riem location.

Commercial passenger traffic: 1992–2012

Since it opened in 1992, the airport's annual passenger numbers have more than tripled. The new Munich Airport started out with 12 million passengers in 1992. The terminal's capacity was stretched to the limit within just a few years. The opening of the new Terminal 2 in 2003 led to a sharp rise in passenger traffic: In 2012, 38.4 million travelers used Munich Airport.

1992 – 2015: Commercial passengers in millions**Aircraft movements: 1992–2012**

In its early years, Munich Airport handled approximately 192,000 takeoffs and landings per year. By 2012 the number had risen to 398,000. The capacity bottlenecks in the runway system have since become quite noticeable. During peak periods we have no more available slots for take-offs and landings, so that airlines requesting slots for new connections

are often disappointed.

1992 - 2015: Aircraft movements in thousands
