

Presenting at Paris Climate July 15

1573€ of 1 600 € goal

Raised by 30 people in 22 months

Dear friends...

thank you so much for your welcome support. We are approaching a critical time with the December 2015 UN Climate Treaty. Soon is the last conference in a build up to the December Paris Treaty, which is held in Paris in July, this will be a pivotal point for Chemtrail activism. I have applied to actually present at this conference in Paris and have been successful.

Dear Max Bliss,

We are very pleased to inform you that your contribution entitled “Exploring The Concerns Of Emerging Climate Sceptic Groups Within Civil Society” has been selected for a poster presentation. A poster communication is a great opportunity to support in-depth communication and presentation of your work, results and achievements, and are very efficient for conveying messages to a large audience with time for discussion that cannot be offered in oral sessions.

My abstract:

" Exploring the concerns of emerging climate sceptic groups within civil society - a growing proportion of society are using the information age to research the past, observe the present and are subsequently becoming organised to protect the future, reflecting a perception of man's influence on climate change - whether intentional or UNintentional."

Friends... years of research and activism has left me in need of funding... please do help to secure that our voice is heard at this seminal conference and ensure the establishment understands that we do NOT consent to weather and climate engineering.

Funds cover entrance, hotel and travel and is much needed and very welcome. Thank you all so much for the vital support you have already given and the ongoing momentum of our growing movement. United we stand, divided we fall. United with integrity, the truth shall set us free. If we want change... then we have to BE the change we want to see... please help to make this land mark event a success for the Chemtrail movement, this is the BIG one.
