CLIMATE PROFESSOR QUILTS BIASED GLOBAL WARMING IPCC

Written by De Telegraaf

Dutch Professor Richard Tol has resigned from the Climate Panel of the UN. Professor Tol disagrees with the biased negative conclusions of the latest UN climate report. The consequences of climate change are being systematically over-estimated, according to him.

"The Panel is directed from within the environment lobby and not from within the science."

The UN IPCC presented its fifth climate report in Yokohama at the end of last month. The IPCC says if there are no changes in world-wide climate policies then the chance of calling a halt to further warming of the earth will be lost, says the report's most important conclusion and warning.

But, according to Professor of Climate Economy Tol, the tone of the report is grossly "alarming and apocalyptic". The consequences of climate change are being over-estimated. "This over-estimation is encouraged by the self-selection of authors and references within the Panel" Tol told the Belgian newspaper De Morgen.

There are top scientists in the UN IPCC, but there are nonetheless many mediocre researchers. Besides which there are a number of people who have the right political connections. The organisation is directed and controlled by people who benefit from climate policy. The UN IPCC is directed from within the environmental lobby and not from within the science."

Consequently Professor Tol has resigned from the Panel with immediate effect. He has been dissatisfied for a long time. According to Tol two official investigations have indicated that there is systematic over-estimation of the consequences of climate change within the UN's IPCC.

If client change it not real - the consequence of pro climate change policy good for mankind in many ways. If client change is real, consequences would be apocalyptic. The logic thing to do is to play the save card..?

Wasting \$100,000,000,000 a year is "good for mankind" is it? Spending it on humanitarian aid might be better.

Don't you get it? Sound, valid physics can be used to prove carbon dioxide cools, but by less than 0.1 degree.

Professor Tol

Thank you for your work, and having the courage to uphold ethical standards. As a Military Analyst, and following the subject it has never been about science. For your use, a powerpoint of 5 slides for your viewing. This from U.S. perspective.

See: www.slideshare.net/slideshow/embed_code/33671517

Kindest to you all, wherever you may be

Lt. Powell

Please explain how Carbon Credits in any way benefit mankind. Please show how increases in atmospheric CO2 do anything except benefit mankind.
