

New York Skywatch

New York Skywatch July 29, 2010

Here is the Q & A interview with Antonio & Rosario Marciànò (Tanker Enemy) They are from Italy, and have documented video evidence of identical aerosol programs and incredible anomalies. We dive into the alien-ufo and terra-forming topics also. Thank you all for submitting questions.

Question: You are among a few who have filmed very strange activity, what is the strangest thing you've seen in the skies? What is the strangest thing you've filmed - (include video link if possible)

Answer: Il fenomeno più strano che siamo stati in grado di riprendere è rappresentato da questo video, [<http://www.tanker-enemy.tv/missing-plane.htm>] nel quale si può osservare un Being 757 entrare in un cumulo e sparire all'interno di esso. Negli stessi istanti si possono scorgere alcune sfere di luce fuoriuscire dalla nuvola, mentre del velivolo non v'è più traccia.

The strangest phenomenon that we were able to film is recorded in this video, [<http://www.tanker-enemy.tv/missing-plane.htm>] in which you can see Boeing 757 entering a cloud and disappearing inside of it. In those moments, you can discern some balls of light coming out of the cloud, while the aircraft disappears.

Question: Have seen hologram planes or other objects trails?

Answer:

Ita E' possibile che in qualche caso siano usate tecnologie avveniristiche, più che altro per dissimulare gli aeree, ma la teoria degli ologrammi appare molto

debole, perché gli ologrammi possono essere realizzati su uno spazio ben delimitato e con uno sfondo scuro. Non possono essere realizzati di giorno e tanto meno con luce solare forte. Inoltre la scarsa visibilità dovuta alla nebbia chimica e le stesse caratteristiche tipiche delle videocamere commerciali possono creare degli artefatti che inducono ad errate interpretazioni.

En It is possible that, in some cases, futuristic technologies are used, mostly to hide the airplanes, but the theory of holograms looks very weak, because holograms may be made on a clearly defined space with a dark background. Holograms cannot be made in the daylight, especially with a bright sunlight. Also the low visibility due to chemical fog and the same typical characteristics of commercial cameras can create artefacts and optical effects that lead to misinterpretation.

Question: Do you suspect aliens are involved with these spraying projects? Is it a terra-forming project?

Answer:

Ita Più che agli alieni si potrebbe pensare ad essere interdimensionali; il terraforming pare essere attuato per rendere l'ambiente adatto ad esseri viventi il cui DNA è basato sul silicio anziché sul carbonio. E' possibile delineare il seguente scenario: esseri ostili, alleati dei militari e dei governi terrestri, sono contrastati, anche se in maniera debole e sporadica da forze interessate a salvaguardare il pianeta (vedi le sfere di luce spesso in azioni di osservazione o disturbo in prossimità dei voli chimici).

En May be we should think to interdimensional creatures than aliens. The terraforming seems to be implemented to make the environment suitable for living beings whose D.N.A. is based on silicon rather than carbon. It is possible to establish the following scenario: hostile beings, allies of the armies and world governments, are combated, even if ineffectually and sporadic way, by forces who want to safeguard the planet (see some balls of light which often observe or disturb the chemical flights).

Question: A recent report shows "chronic barium" exposure linked to multiple sclerosis, here is link:

http://www.ncbi.nlm.nih.gov/sites/entrez?cmd=Retrieve&db=pubmed&dopt=AbstractPlus&list_uids=15082100&query_hl=2

Answer:

Ita Sia Mark Purdey sia Clifford Carnicom sia molti altri scienziati indicano il bario come causa di numerose patologie tra le quali la sclerosi multipla negli uomini e la encefalite spongiforme nelle vacche. La ricerca del Dottor Purdey fu segnalata da Tanker Enemy nel 2006 e poi fu rilanciata sul blog in lingua inglese al seguente link: <http://tankerenemy.blogspot.com/>

Questi studi sono accreditati e documentati ed hanno un riscontro oggettivo dai diversi reports che abbiamo negli anni ricevuto dalle persone colpite da Sclerosi Multipla e che hanno mostrato, attraverso l'analisi del mineralogramma, di avere l'organismo contaminato da metalli come il bario, l'alluminio ed altri.

En Mark Purdey, Clifford Carnicom and many other scientists indicate the barium as a cause of many diseases such as multiple sclerosis in men and bovine spongiform encephalitis in cows. The research of Dr Mark Purdey was reported by Tanker Enemy in 2006 and then was published on the blog in English at the following link: <http://tankerenemy.blogspot.com/2009/02/chronic-barium-intoxication-disrupts.html>

These researches are punctilious and documented . They were supported by objective feedback from various reports we have received over the years from people affected by multiple sclerosis and who have shown, by analysis of metals in the hair, that their body is contaminated by metals such as aluminum, barium, lithium and so on.

Question: Have you looked into the health effects connected with the fall out of metals and particulates related to what they're spraying?

Answer:

Ita Certamente! I primi sintomi sono quelli legati alle vie aeree, laddove abbiamo potuto accertare un notevole incremento di crisi respiratorie, asma, allergie. In molti casi sono stati registrati decessi per asfissia.

I sintomi rilevati sono i seguenti:

- ▷ September 2012
- ▷ August 2012
- ▷ July 2012
- ▷ June 2012
- ▷ May 2012
- ▷ April 2012

Moderata o severa irritazione della pelle, degli occhi e del tratto respiratorio, cefalea, nausea, vomito

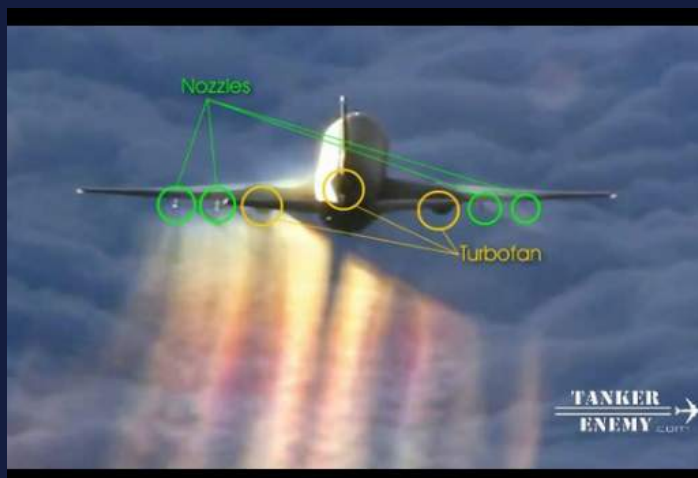

Sintomi da sovraesposizione

Simili a quelli causati dal toluene: irritazioni della pelle e degli occhi. Se inalato, provoca cefalea, nausea, vomito; se ingerito, irritazione del tratto gastro-intestinale, nausea, vomito.

Irritante per gli occhi. I vapori possono determinare sonnolenza e stordimento. Tossici per gli organismi acquatici. Può causare danni ai polmoni, secchezza e screpolatura della pelle. Nocivi, se ingeriti. Limitata evidenza di effetti oncogeni. Possibili gli aborti.

Contengono elementi che possono cagionare danni ai seguenti organi: reni, fegato, apparato respiratorio, pelle, sistema nervoso centrale, occhi (cristallino e cornea).

En Certainly! The first symptoms are those related to the throat, larynx, pharynx, lungs. We recorded a significant increase of respiratory crisis, asthma, allergies. In many cases, were registered deaths from asphyxiation. The symptoms are the following: moderate or severe irritation of the skin, eyes and respiratory tract, headache, nausea, vomiting, irritation of the gastrointestinal tract, lung damage, skin dryness and cracks. To metals are linked neurodegenerative disease too, like Alzheimer, Parkinson.

Question: How are others in your community responding to the aerosol spraying? Are they indifferent?

Answer:

Ita Ormai in Italia molti conoscono il problema (sicuramente alcuni milioni di cittadini) grazie soprattutto ad alcune trasmissioni televisive, ma le persone, di solito, sono indifferenti o rassegnate. Esiste solo un piccolo gruppo di ricercatori ed attivisti, come ad esempio il fisico Corrado Penna, il biologo Giorgio Pattera, l'editore e pilota Tom Bosco. Molti scienziati e ricercatori un tempo attivi nella divulgazione sono stati indotti, attraverso minacce, diffamazioni, intimidazioni, ad abbandonare.

En Now in Italy many people know the problem (approximately a few million citizens) by means of some broadcasts, but people usually are indifferent or resigned to their fate. There is only a small group of researchers and activists, such as the physical Corrado Penna, the biologist Giorgio Pattera, the publisher and pilot Tom Bosco. Many scientists and researchers who wrote articles and studied the problem, in the past years, have been "convinced" to give up, by threats, defamation, harassment.

Question: Does the commercial media in Italy report on the aerosol activity?

Answer:

Ita In Italia le prime ad occuparsi del fenomeno "chemtrails" sono state le piccole reti televisive locali, seguite poi da un canale a diffusione nazionale. I quotidiani, invece, non si occupano quasi mai della questione, a meno che non debbano ricondurre il tutto ad un fenomeno causato dalla paranoia di cittadini visionari.

En In Italy small local television networks approached the phenomenon "chemtrails" and then a national network. The mainstream newspapers don't mind this issue; if they mind this issue, is for writing that citizens and researchers are paranoid.

Question: How did you begin to get involved with filming the planes?

Answer:

Ita Abbiamo cominciato a filmare gli aerei chimici nel maggio 2005, subito dopo aver osservato l'inizio delle operazioni di aerosol clandestine sul nostro quartiere. Poco tempo dopo abbiamo deciso di aprire un blog interamente dedicato alla questione: <http://www.tankerenemy.com/>

En We started filming chemical aircrafts in May 2005, after observing operations of clandestine aerosol on our neighbourhood. So we decided to open a blog to publish articles about this issue: <http://www.tankerenemy.com/>

Question: What are your comments regarding a de-population agenda?

Answer:

Ita Il primo obiettivo delle chemtrails è la popolazione e ciò viene dimostrato senza ombra di dubbio dal fatto che le irrorazioni si concentrano sui centri abitati e/o coltivati. Le scie chimiche sono usate per lo scopo della depopulation, ma insieme con le radiazioni nucleari, gli OGM, le onde elettromagnetiche, i pesticidi etc., secondo le indicazioni della Georgia Guide Stones. Ovviamente le scie chimiche rientrano in un piano che comprende almeno 400 programmi di aerosol differenti finanziati sia dai militari sia dai civili (farmaceutiche, aziende agroalimentari, governi, società telefoniche, centri universitari).

En The first target of chemtrails is the population: that's why chemtrails are over crop cultivations and cities. Chemtrails are used for the purpose of depopulation, but nuclear radiations, G.M.Os, electromagnetic waves, pesticides have this purpose too, according to the indications of the Georgia Guide Stones. Obviously the chemtrails are referred to a plan that includes at least 400 different aerosol programs funded by either military and civilian agencies (pharmaceutical industries, agri-food companies, telephone companies, governments, universities, space agencies, like N.A.S.A. and E.S.A. and so on).

Questions to Rosario from skywatchers

Question: Has he been able to trace any plane's identification numbers that usually are on the underside of the plane(s)?

Answer:

Ita Gli aerei impegnati nelle operazioni di aerosol clandestine sono SEMPRE privi di marche identificative ed inoltre risultano invisibili ai radar civili.

En Aircrafts engaged in the clandestine aerosol operations are ALWAYS without identifying brands and are invisible to civilians radar too.

Question: Has he taken notice of the notches like bar code that emerges in the chemtrail mixtures as they are expanding?

Answer:

Ita Per mezzo del trattamento attraverso le onde elettromagnetiche e le energie scalari, talvolta le formazioni artificiali assumono la configurazione di pettini, vertebre, onde, ma queste forme sviluppano poi una trasformazione casuale e non direttamente correlabile ai codici a barre.

En By means of electromagnetic waves and scalar energies, artificial clouds become similar to combs, vertebrae, undulations, but these shapes depend on a casual transformation and are not connected to bar codes.

Question: Has he been noticing the glyph data, that the Smart Dust forms in

the chemtrail mixtures?

Answer:

Ita La smartdust o M.E.M.S. (micro Electro mechanical Sensors) viene impiegati in ambito meteorologico ma anche in ambito puramente militare e di spionaggio elettronico. Infatti i nanosensori diffusi tramite droni sono programmati per trasmettere e ricevere dati da e verso un target, che può essere un ambiente ma anche un essere umano. La smartdust comunica attraverso i sistemi wireless basati sul protocollo 811g, usati comunemente per l'accesso ad Internet ed usano quindi le frequenze analogiche che attualmente sono state dismesse e sostituite dal digitale terrestre. Infatti il vero motivo che ha portato alla migrazione delle trasmissioni televisive sulle frequenze DDT è da ricercarsi nella necessità di liberare le frequenze necessarie per le comunicazioni tra le M.E.M.S. ed i sistemi di controllo militari, così come previsto nel documento *Owning the weather*.

En The smart dust or M.E.M.S. (micro electro mechanical sensors) is used in meteorological context but also in military and electronic espionage. In fact the nano sensors spread by drones are programmed to transmit and receive data to and from a target: these targets can be an environment, but also a human being. The smart dust communicates through wireless systems relies on 811g, commonly used for the access to Internet and then smart dust uses the frequencies currently dismantled and replaced by digital terrestrial. In fact the real reason that led to the substitution of broadcasting frequencies D.T.T. is linked to the communications between the M.E.M.S. and military control systems, as foreseen in document "*Owning the weather within 2025*".

Question: Has he seen any unusual activity beyond the fake cloud mixtures higher up in the atmosphere, of any type of training exercises, of perhaps their new hypersonic planes?

Answer:

Ita Non abbiamo potuto riprendere o fotografare attività in alta quota, ma la giornalista indipendente Carolyn Williams Palit si sofferma sull'importanza che ha la ionosfera nelle operazioni segrete relative alla militarizzazione dello spazio. Ella sottolinea anche il ruolo dei satelliti e, sulla base di documenti declassificati, descrive le operazioni che vengono compiute da aerei privi di pilota negli strati più alti dell'atmosfera ed anche in quelli superiori. Senza dubbio i militari possiedono ed usano già aerei in grado di raggiungere velocità elevatissime, velivoli invisibili che usano sistemi di mascheramento per lo più basati sulla deflessione dei fotoni.

En We couldn't shoot or photographing activity at high altitudes, but the independent journalist Carolyn Williams Palit focuses on the importance that has ionosphere has in covert operations relating to the space militarization. She also emphasises the role of satellites and, by using declassified documents, describes the operations that are performed by aircrafts without pilot (drones) in higher layers of the atmosphere and in the levels above too. Without doubt the military forces get and already use aircrafts capable of achieving incredible speeds, invisible aircrafts, by using cloaking systems mostly based on deflection of photons.

Question: Does he have any satellite constellations (usually in sets of 66 or more) in the area where he lives in Italy?

Answer:

Ita Per quanto ci consta, non siamo al corrente della presenza di satelliti geostazionari sopra la nostra area (Italia), fuorché quelli deputati alla navigazione GPS. I satelliti MODIS (acqua e terra) della N.A.S.A., ad esempio, sorvolano l'Italia verso le 10 a.m e le 2 p.m.

En We are not aware of the presence of geostationary satellites above our area (Italy): those kinds of satellites are linked to the G.P.S. navigation. Otherwise MODIS (meteorological satellites that sometimes show chemtrails) satellites (Aqua and Terra) of N.A.S.A., for example, pass over Italy at 10 A.M. and 2 P.M. approximately.

Question: Could you ask him if he has ever seen a silver jet hover low in the sky?

Answer:

En We have seen many times an A-330 at very low altitude spreading unknown substances from APU.
