

The SAPRC Collection

In 1997, the Statewide Air Pollution Research Center at UCR closed its library and its materials were acquired by the UCR Libraries. The books and other mainstream materials were integrated into our collection almost immediately, and the other materials, which we sometimes call ephemera, were put into storage. It was in the back of our minds to take them out at some point when time allowed.

14 years later, it seems, time allowed. Or rather, we carved out bits of time and got an intern involved and we finally made it through the collection (or almost all of it). It turns out that it told a fascinating story about how a plant pathologist from UCR went on to become the highest ranking air pollution official in the United States and how California became aware of the danger that was staring it in the face.

The collection includes a number of government documents, nearly all from the U.S.; many commissioned reports from Scientific Laboratories; conference proceedings, both published and unpublished; some dissertations and theses and years of reports from such organizations as W.H.O. and the National Academy of Sciences.

The biggest surprise was that not all of the reports were to be found in Worldcat, making our copies of those reports, which had languished in the basement for 14 years, rare commodities. We became very excited to be bringing these documents into the light of day.

This is what we found. Please keep in mind that we were more concerned about documenting this collection than we were about typing. At this point, we have send trucks of unique materials to the Southern Regional Storage Facility at UCLA and they should be showing up in Worldcat.
